Einsteinstraße 177, München 81677 | 17.07.1987 - Australia | Australian citizen - German Blue Card holder

TECHNICAL SKILLS

Languages	: TypeScript, JavaScript, C#, Ruby, PHP, SQL, HTML, CSS
Backend	: Node.js, NestJS, Express, Ruby on Rails, Symfony, GraphQL, REST APIs
Frontend	: React, Next.js, Angular, Vue.js, Aurelia
Databases	: PostgreSQL, MongoDB, DynamoDB, SQL Server
Cloud & DevOps	: AWS (Lambda, Cognito, DynamoDB), Docker, Serverless Architecture
Tools	: Git, Webpack, Jest

EXPERIENCE

Fullstack Engineer <i>SAP Leanix</i>	Dec 2025 – Present <i>Munich, Germany</i>
Working with Angular, Node, Typescript, GraphQL on a large scale SaaS product for enterprise architecture management	
Senior Fullstack Developer <i>Myra Security</i>	Jul 2024 – Nov 2025 <i>Munich, Germany</i>
- Lead developer for critical rebuild of customer configuration platform using TypeScript, ReactJS, NextJS, Node.js, NestJS, GraphQL - Developed backend services using NestJS and Node.js with GraphQL API integration, connecting to legacy PHP/Symfony backend - Performed PostgreSQL database investigations and optimizations for production issues - Built O(1) permission lookup system in backend authorization layer, critical for unblocking initial product release - Implemented strict type-checking tooling between frontend and Node.js backend for GraphQL queries - Full-stack approach: developed features across React frontend, Node/NestJS backend, and PHP/Symfony legacy systems - Led code reviews across team and onboarded new developers on full-stack architecture	
Senior Fullstack Engineer <i>Conde Nast</i>	June 2023 – June 2024 <i>Munich, Germany</i>
- Identified and prototyped architectural approaches to optimise the SSR of the React/Node site - Mentored and led the team on refactoring existing codebase - Analysed runtime performance to spot existing bugs - Led the technical side of the project to rebuild the nav sections for sites including Vogue.com, Glamour.com - Built prototypes to propose improvements to the codebase using TypeScript, ReactJS, Styled-Components, GraphQL, HTML	
Fullstack Software Engineer <i>Lifelenz</i>	May 2021 – June 2023 <i>Adelaide, Australia</i>
- Designed and implemented backend APIs using Ruby on Rails, PostgreSQL, and GraphQL Ruby for complex business requirements (multi time-zone employee scheduling) - Optimized database queries and asynchronous network requests, improving page loading time by 3+ seconds - Contributed to backend team on query optimization and GraphQL implementation, becoming subject matter expert	

- Converted REST services to **GraphQL** handling complex asynchronous dependencies and caching strategies
- Developed full-stack features using **TypeScript, Aurelia/Angular, ReactJS, Ruby on Rails, PostgreSQL, Docker**
- Implemented test-driven development using **Jest** for both frontend and backend code
- Refactored core functionality safely to support new features across the full stack

Technical Lead

Feb 2020 – May 2021

RAA

Adelaide, Australia

- Lead role in architecting and developing payment provider migration affecting entire business using **C#, Angular, AWS**
- Architected project infrastructure for next several years using **C# backend, Angular frontend, AWS**
- Developed full-stack features for customer onboarding using **C#, Sitecore CMS, GraphQL APIs, TypeScript, React, Angular**
- Mentored junior developers on full-stack development and advocated for architectural improvements

Web Developer

Aug 2019 – Jan 2020

Fusion

Adelaide, Australia

- Architected and developed secure **payment processing system** integrating three third-party **APIs** for banking and healthcare clients
- Developed features for multiple clients using **C# CMS backends (Episerver), TypeScript, Angular, Vue.js**
- Managed production deployments and tight deadline delivery

Web Developer

Sept 2017 – July 2019

Data Action

Adelaide, Australia

- Architected and implemented **serverless authentication microservice** using **AWS Lambda, DynamoDB, and AWS Cognito** for passwordless data retrieval
- Designed **NoSQL database schemas** in **DynamoDB** and built **REST APIs** with **Node.js Lambda functions**
- Developed full-stack features on greenfield project using **TypeScript, Angular, C#, AWS**
- Implemented reactive state management using **Redux/NgRx** and **RxJs**
- Developed features for legacy **C#/Episerver** backend systems

EDUCATION

University of Adelaide

Bachelor of Maths and Computer Science

Adelaide, Australia

Jan 2009 – December 2012

PERSONAL PROJECTS

Backend Learning Projects

Node.js, Express, PostgreSQL, Redis, Docker

- Building microservices architecture with **REST** and **GraphQL APIs** to strengthen backend system design skills
- Implementing authentication systems, caching strategies with **Redis**, and database optimization techniques
- Exploring containerization with **Docker** and infrastructure as code practices
- Applying design patterns for scalable backend architectures and API design best practices

2D Isometric Strategy Game

TypeScript, React, Redux, Canvas API, WebGL

- Developed coordinate mapping algorithms for isometric grid system and user interaction detection
- Implemented performance optimizations including chunk-based rendering for large game worlds
- Transitioned from **Canvas 2D** to **WebGL** renderer for improved rendering performance
- Integrated **Redux** state management with React UI layer for game state

LANGUAGES

- **English:** Native
- **German:** B1
